

Step to download and work with Blender.

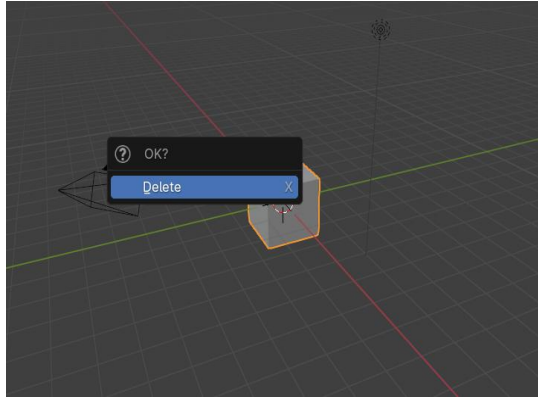

1. Go to the website <https://www.blender.org/download/>
Click on the Download Blender 4.1.1 button.

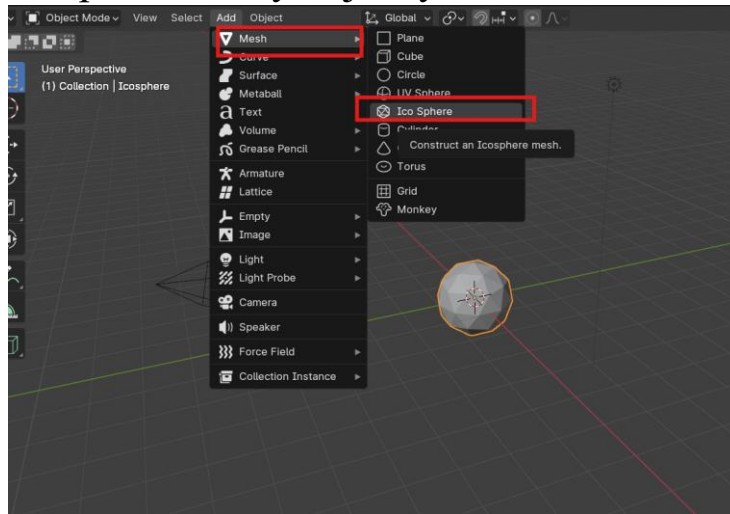

2. Open the blender  Click here to modeling.

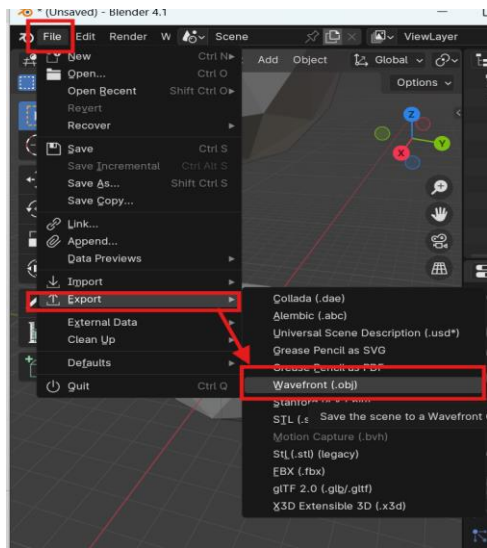

3. Select the default cube (note that when you click on the cube the yellow shows which object you select on). Then hit  key on the keyboard to delete the cube or you can leave it then begin your modeling

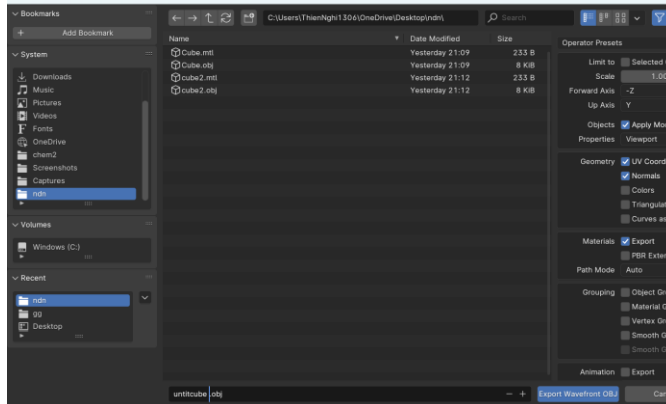

4. Then Select Add (or shift A) to open the menu. Select Mesh and Ico sphere or any object you want to build

5. When you finish building or modeling an object. Select the file then Export it into Wavefront. Obj file

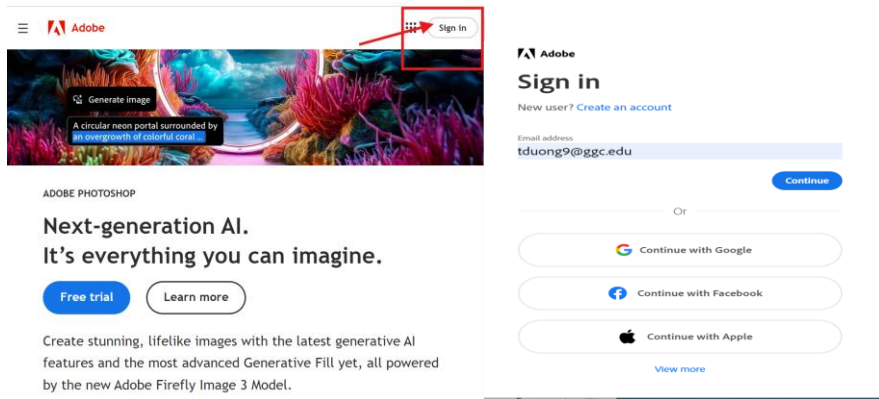

6. Hit Export Wavefront OBJ. Save it and rename your file.

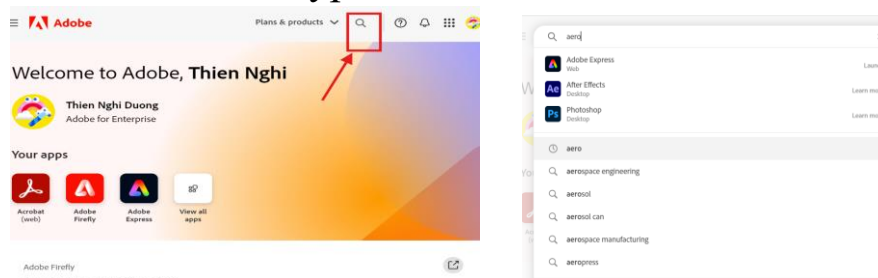

How to Download and integration object in Aero
